

## Algorithm for instagram influence score

What you will be given:

- Number of followers
- Avg. # of Likes
- Avg. # of Comments

What we would like:

We would like an algorithm that rates an Instagram profile on their influence, a score from 1-10. We want the 10/10 influencers to not only be people with millions of followers, but people that have an audience that interacts with them. Follower count doesn't really matter, but like and comment ratio (like to follower ratio and comment to like ratio) do matter.

Let us know if we can provide more info!
